Group work – a tool for student engagement

The pros: great benefit for student engagement, in terms of the valuable interpersonal and organisational skills it develops, and the quality of collaborative work which it enables them to produce (Boud, Cohen, & Sampson, 1999)

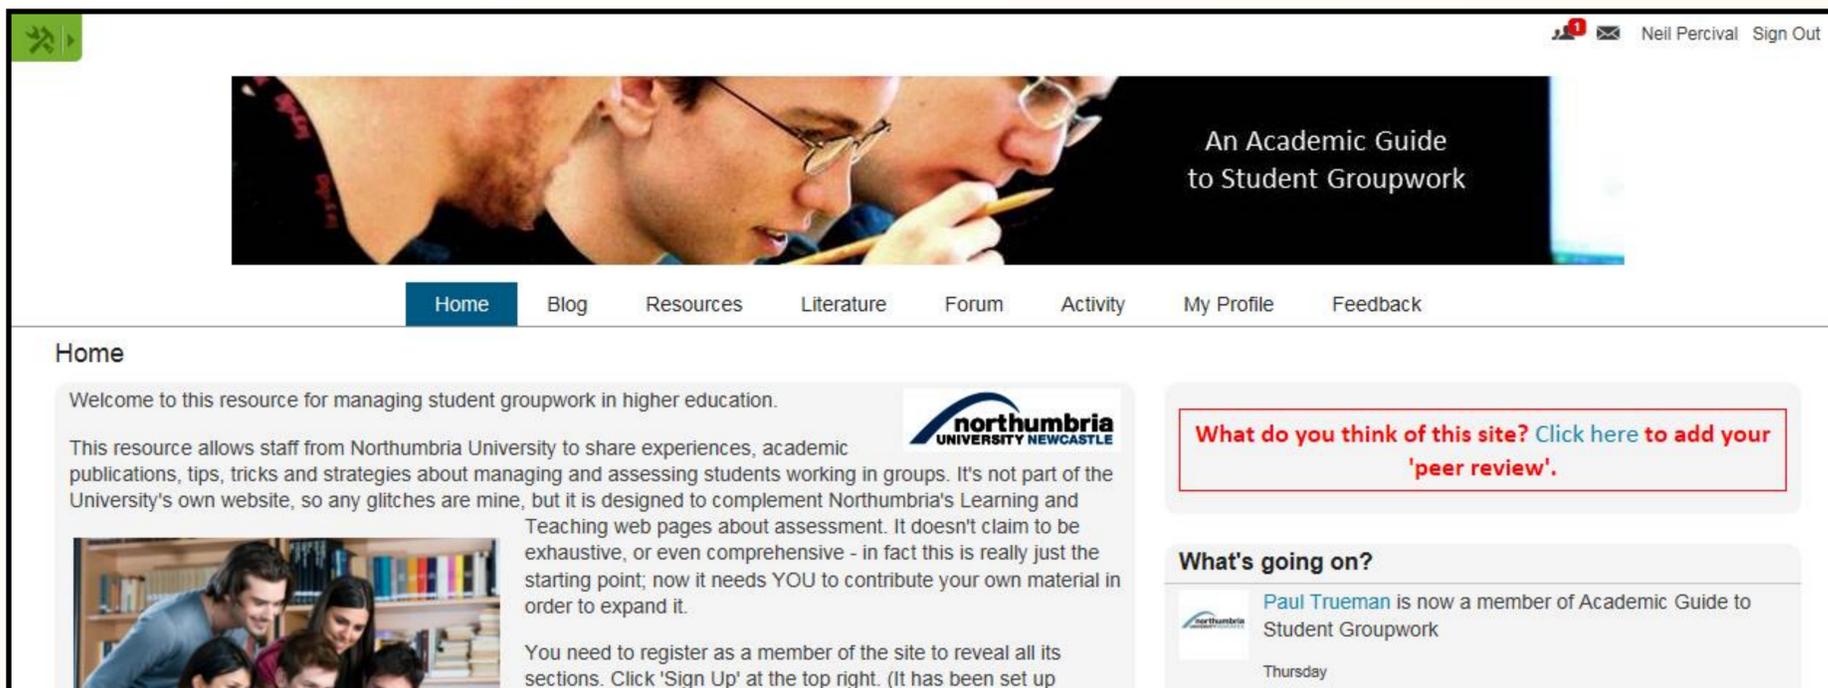

The cons: can be a cause of dissatisfaction for students (Davies, 2009), especially if skills required for successful group work are not taught, enabled and supported within the module or programme (McAllister, 1995; Vik, 2001).

An online community to support academics using group work

I created an online community offering colleagues:

- academic literature resource on student group work
- a means of sharing experiences/case studies
- guidelines and advice resources for good practice
- space for discussion through a forum
- blog for reflective thoughts from participants

groupwork.ning.com

The screenshot shows the homepage of the 'groupwork.ning.com' Ning site. At the top, there is a navigation bar with links for Home, Blog, Resources, Literature, Forum, Activity, My Profile, and Feedback. The main content area features a large banner image of students studying together, with the text 'An Academic Guide to Student Groupwork'. Below the banner, there is a welcome message: 'Welcome to this resource for managing student groupwork in higher education.' This is followed by a paragraph explaining the site's purpose: 'This resource allows staff from Northumbria University to share experiences, academic publications, tips, tricks and strategies about managing and assessing students working in groups. It's not part of the University's own website, so any glitches are mine, but it is designed to complement Northumbria's Learning and Teaching web pages about assessment. It doesn't claim to be exhaustive, or even comprehensive - in fact this is really just the starting point; now it needs YOU to contribute your own material in order to expand it.' A small image of a group of students is shown below this text. To the right of the main text, there is a red-bordered box with the text: 'What do you think of this site? Click here to add your 'peer review'.' Below this, there is a 'What's going on?' section with a post from Paul Trueman, dated Thursday.

Does this website contribute to a 'scholarship of teaching and learning'? These suggest 'yes'...

- Boyer, in coining the term 'scholarship of teaching', looked towards a 'community of scholars' and "a campus-wide, collaborative effort around teaching" (1990).
- Trigwell et al commented that the aim of scholarly teaching was "to make transparent how we have made learning possible...university teachers must... be able to collect and present rigorous evidence of their effectiveness... as teachers." (Trigwell, Martin, Benjamin, & Prosser, 2000).
- Shulman saw teachers as "members of active communities: communities of conversation, communities of evaluation, communities in which we gather with others... to exchange our findings, our methods, and our excuses" (1993)
- Weston & McAlpine saw the scholarship of teaching as "characterized by an intention to share expertise and develop scholarly knowledge about teaching that has a significant impact on the institution and the field" (2001)
- Huber & Hutchings proposed "the teaching commons, an emergent conceptual space for exchange and community among faculty, students, administrators, and all others committed to learning" (2005)

While these suggest 'maybe not'...

- Witman & Richlin (2007) remind us that 'teaching tips' are not the same as the scholarship of teaching (2007).
- For Weston & McAlpine – it has to have impact outside the institution (2001)
- Shulman reminds of the need for peer review: "We develop a scholarship of teaching when our work as teachers becomes public, peer-reviewed and critiqued". (2001)
- Healey is also explicit on the subject: "...if the scholarship of teaching is to match that of research there needs to be a comparability of rigour, standards and esteem" (2000)
- Kanuka comments that publication must "make a significant contribution to knowledge... as theory allows you to make public the intellectual basis of findings" (Kanuka, 2011)

Discussion

- Online moderation and discussion are genuine and potentially rigorous forms of peer review
- If scholarship requires 'making public' - a website could be more genuinely public than a conference paper or journal
- As Kreber comments: "...the scholarship of teaching... is represented not just in formal studies informed by the empirical analytical, interpretive or critical sciences, but also in the public dialogue that ensues from posing these questions in the first place... **We might do better to think of research findings as the start of our conversations into teaching and learning rather than as the conclusion.**" (2013)
- An online community by this definition makes a valid contribution to the scholarship of teaching and learning
